First of all, I would love to transfer my heartiest gratitude to Dr. Ghelawdewos Araia for impressing me to write my opinion. This is also to give my appreciation for Dr. Ghelawdewos’s idea, and also share something that always click my mind. I often read news from http://www.tigraionline.com/ website, and I found Doctor’s Amharic article entitled "Overcoming Water Scarcity Problem in Ethiopia" and read all the details and possible recommended solutions placed by Doctor. Really, I found it very interesting and real practical solution for the water problems we faced every corner of the country. I really appreciate Doctor! We need such solutions, and I think we should also provide solutions in "Native Languages" then, everybody, not only the professionals even the community members who can read and write with their native languages can understand and apply it without the need for detailed scientific knowledge.
